

Velora — Design & Content Brief

2026-09-22 · @Someone

Overview & goals

This brief specifies the content and structure for velora.io: three role-specific landing pages (Client, Contractor, Inspector), a role-selection screen, and three sign-up flows. Visual system — colour, type, imagery, layout — is intentionally left open for whoever builds the page; every section below states what the page must accomplish, then supplies real copy to build from.

One idea should carry every page: **money is safe not because Velora is honest, but because Velora physically cannot move it alone.** Every headline, section, and line of microcopy below restates some version of that, in whichever role's own words.

What "it worked" looks like, per role:

- **Client** — stops treating "send money home to build" as a leap of faith. Signs up because the fear of being scammed finally has a real answer.
- **Contractor** — sees a way to win diaspora clients who'd otherwise never trust a stranger with real money, and to get paid the moment work is verified — no chasing invoices.
- **Inspector** — sees paid, recognised use for a licence that otherwise sits idle between larger contracts.

All figures, mechanics, and fees below come directly from the attached Velora product document (escrow rules, account types, fees, current build state) — nothing here is invented.

Voice & tone

Five things Velora's copy is, and is not:

Velora is	Not	Do	Don't
Transparent	Vague or legalistic	"3% is added when you fund a stage — you see the number before you pay."	"Nominal service fees may apply."

Velora is	Not	Do	Don't
Grounded	Techy or abstract	"Paid the moment your inspector confirms the foundation is poured."	"Funds are disbursed upon milestone verification completion."
Steady	Alarmist or salesy	"Nobody can move this money alone — not the contractor, not Velora."	"Don't get SCAMMED like thousands of Nigerians!"
Respectful of expertise	Condescending or generic	"Your licence number and site visits build the profile clients pick from."	"Anyone can join and start earning today!"
Plain-spoken	Jargon-heavy	"Held in an account no single party can touch."	"Funds are locked in a non-custodial escrow contract."

Tone shifts with what the visitor is feeling; voice doesn't:

- **Hero and pain-point sections** (anxious, guarded) — name the fear plainly before offering the fix. Never minimise it.
- **How-it-works sections** (learning) — short numbered steps, one idea per step.
- **Fees sections** (skeptical) — lead with the number. Never bury a percentage inside a sentence about something else.
- **Sign-up forms** (committing) — confident and brief. Every field earns a reason if it isn't self-explanatory.
- **Confirmation screens** (just committed) — warm, short, and immediately useful: tell them the next thing to do.

Reading level: plain, everyday language throughout. General-audience pages (Client, shared FAQ) should read comfortably at a 7th–8th grade level; Contractor and Inspector pages can assume professional familiarity but should still keep headlines and buttons jargon-free.

Site map & navigation

E --> H[Client dashboard]
F --> I[Contractor dashboard]
G --> J[Inspector dashboard]

```

- **Homepage (/)** — a short, neutral chooser: three cards, one per role, no persuasion copy of its own. Anyone arriving without a role in mind (organic search, word of mouth) lands here first.
- **/clients , /contractors , /inspectors** — the three landing pages in this brief. Paid campaigns and targeted outreach can link straight to the relevant one, skipping the homepage.
- Each landing page's primary CTA jumps straight into that role's sign-up form — the role is already chosen by which page they clicked from, so don't ask again.
- A small role-switch link sits in the header of every landing page ("Building from abroad? Bidding on builds? Licensed to inspect?") so a visitor who landed on the wrong page can correct course in one click instead of hitting a dead end.
- **/signup** (reached from Login's "New here?" link, or shared directly) — the one place that shows the role-picker screen before a form, since there's no prior page to infer the role from.
- Shared header and footer (see Shared components) appear on all three landing pages, with only the primary CTA and role-switch label changing.

Landing page — Client

Audience: Nigerians living abroad who want to build or renovate a house back home and have no reliable way to supervise it in person.

Hero

- **Eyebrow:** For Nigerians building from abroad

- **Headline:** "You wired the money. Six months later, is anyone still building?"
- **Subhead:** "Velora holds your money in escrow and only pays your contractor once an independent inspector confirms the work — in person, stage by stage, no matter where you live."
- **Primary CTA:** "Start your build"
- **Secondary CTA:** "See how it works" (anchors to How it works)

"Sound familiar?"

- "A contractor asks for 50-100% upfront — then goes quiet."
- "The quote was cheap. Three months in, the price keeps 'coming up' for reasons you can't check."
- "You paid for granite countertops. What actually goes in might be nothing like it."
- "Something feels off, but you're thousands of miles away and can't just drive over to look."

Stat callout: Nigerians abroad send an estimated **\$2-6 billion** home every year to build. By some estimates, **close to half of it never becomes a house.**

Bridge line: "There's no national list of dishonest contractors, and almost none of this is ever reported, let alone prosecuted. Velora exists so you don't need one to protect your money."

How Velora actually works

1. **Post your project.** What you're building, where, your budget, and how many stages.
2. **Pick your team.** Browse contractor profiles and bids, then choose an independent inspector — quantity surveyor, structural engineer, or architect — to check the work in person.
3. **Fund one stage at a time.** Your money goes into an escrow account tied to your project — not to Velora's account, not to the contractor's.
4. **Your inspector visits the site.** They confirm, in person, that the stage is actually done — before anything is paid.
5. **You approve.** Only then does the contractor get paid, the inspector gets paid, and Velora takes its fee — all three, at once.

Callout: "Fund a stage and nothing gets built? Pull your money back. Nobody can spend it without your sign-off — not your contractor, not your inspector, not Velora."

An inspector who answers to you, not your contractor

"You choose your inspector — your contractor doesn't. They visit the site in person at every stage and confirm what they actually find before a single dollar moves."

Pick a contractor based on proof, not promises

"Every contractor on Velora has a public profile: years of experience, specialties, and a portfolio of completed builds with photos. Compare real bids side by side before you commit to anyone."

What it costs

"**3%**, added when you fund a stage. You see the exact number before you pay — never a surprise fee added after the fact."

Why this needs to work differently

"A normal escrow means trusting a company's bank account. Velora's escrow is enforced by the system itself: funds release only when you and your inspector both confirm a stage, and no one — including Velora — can move them any other way. It's also why sending money through Velora settles in seconds for under 1%, instead of the roughly 8.5% and multi-day wait that banks charge. Velora runs on Solana and settles in USDC, a digital dollar built to always equal \$1."

Frequently asked questions

- **What happens if a stage is funded but the contractor doesn't do the work?** You get your money back — if nothing is submitted for a stage you've funded, you can pull those funds out of escrow.
- **Do I need to understand crypto to use this?** No. You fund your project the way you already send money abroad — Velora handles the conversion behind the scenes.
- **What if I don't know any inspectors?** You don't need to. Browse Velora's inspector directory — every listed inspector is a licensed quantity surveyor, structural engineer, or architect with a public profile and past reviews.
- **What does this actually cost me?** 3%, added when you fund each stage. You'll see the exact amount before you confirm payment.
- **Where does my money actually sit?** Each stage you fund goes into its own escrow account tied only to your project — not in Velora's account, and not in the contractor's.
- **Can Velora take my money?** No. Velora can't release, freeze, or move funds on its own. The same two-approval rule applies to everyone, including us.

Final CTA

- **Headline:** "Build it right, from wherever you are."
- **Body:** "Post your project in minutes. You don't pay anything until you're ready to fund the first stage."
- **CTA:** "Start your build"

Landing page — Contractor

Audience: Contractors and building firms who want steady, verifiable work — especially from clients who'd normally never trust someone they've never met.

Hero

- **Eyebrow:** For contractors ready to build
- **Headline:** "Diaspora clients want to hire you. Give them a reason to say yes."
- **Subhead:** "Bid on funded projects, prove your work stage by stage, and get paid automatically the moment it's verified — no chasing clients for money."
- **Primary CTA:** "Find your next job"
- **Secondary CTA:** "See how it works"

"You do good work. Getting paid for it is the hard part."

- "A client abroad won't wire real money to a stranger — even when your work is solid."
- "You finish the job. Then it's weeks of calls just to get paid."
- "One bad contractor scams a family, and suddenly every contractor looks like a risk."

Bridge: "Velora solves the trust problem from the client's side, so you can focus on building instead of chasing invoices."

How it works

1. **Browse open jobs.** See budget, stage breakdown, and location before you bid.
2. **Bid with your terms.** Your price, your timeline, your proposed stage breakdown.
3. **Win the job — the money's already there.** The client funds the first stage into escrow before you start.
4. **Finish the stage. Upload proof.** Photos or video of the completed work.
5. **Get paid, automatically.** An independent inspector confirms it in person, the client approves, and you're paid — no invoice, no follow-up call.

Every job becomes proof

"Your public profile shows your company, years of experience, specialties, and a portfolio of completed builds with photos — the evidence future clients see before they even read your bid."

What it costs

"**1%**, deducted only from a stage you've actually been paid for — never upfront, never on work that's still pending. You see your exact net payout before you bid."

The money's real before you start

"A client funds a stage into escrow before you lift a shovel. You're not waiting on someone's word — you're waiting on an inspection."

Frequently asked questions

- **What if the client won't approve my finished work?** *(Open question — the source material doesn't define a dispute path for a client withholding approval on inspector-confirmed work. Resolve this before the page ships; contractors will ask immediately. See Open questions.)*
- **How do I get paid?** Automatically. The moment your inspector confirms a stage and your client approves it, funds move to you.
- **What does Velora take?** 1%, deducted only from a stage you've been paid for.
- **Do I need my own inspector?** No. Your client selects an independent inspector — either from Velora's directory or one who bid to inspect the job. You don't pay them and don't deal with them directly.
- **What if I don't have a portfolio yet?** Add whatever you have, even one project. Every job you complete on Velora is added automatically once it's approved.

Final CTA

- **Headline:** "Stop selling trust. Start proving it."
- **CTA:** "Join as a contractor"

Landing page — Inspector

Audience: Licensed quantity surveyors, structural engineers, and architects who want paid, flexible work that uses their credentials.

Hero

- **Eyebrow:** For quantity surveyors, structural engineers & architects
- **Headline:** "Your licence is worth more than one firm's project list."
- **Subhead:** "Get paid to do exactly what you're trained for — visit a site, confirm the work is real — for diaspora clients who have no one else to check on their behalf."
- **Primary CTA:** "Start inspecting"
- **Secondary CTA:** "See how it works"

"Between contracts, your expertise sits idle."

- "Firm work comes in waves — steady one season, gone the next."
- "There's no simple way for a family building from abroad to find someone qualified to check on their site."
- "One-off site visits for independent clients rarely pay what your time is worth."

Bridge: "Velora connects your licence to a job that needs exactly what you already do — for pay, per visit, on your own schedule."

How it works

1. **Set up your profile.** Licence number, qualifications, and the areas you cover.
2. **Get work two ways.** Bid on open jobs, or get picked directly by a client from your public profile.
3. **Visit the site.** Confirm — or reject — each stage in person, with photos.
4. **Get paid per stage.** Automatically, the moment the client approves what you confirmed.

Every inspection builds your record

"Your public profile shows your qualifications, service areas, the projects you've inspected, and client reviews — so the next job finds you."

What it costs

"**1%**, deducted only from what you're paid for a confirmed stage — nothing upfront, nothing on jobs you haven't done yet."

You work for the client, not the contractor

"A client picks you directly, or you win the job by bidding — never the contractor. Your job is to say what you actually found on site. Nothing moves until you do."

Frequently asked questions

- **Who decides which jobs I inspect?** Either you, by bidding on open jobs, or a client, who can select you directly from your public profile.
- **What do I need to sign up?** Your professional credentials and licence number, as a quantity surveyor, structural engineer, or architect.
- **How and when do I get paid?** Per stage you confirm, automatically, the moment the client approves it. Velora takes 1% from that payment — nothing upfront.
- **What happens if I reject a stage?** *(Open question — the source material doesn't specify what follows a rejected stage: whether the contractor gets a chance to redo the work, or whether you're still paid for the visit. Worth confirming before this page ships. See Open questions.)*

Final CTA

- **Headline:** "Get paid for what you already know how to check."
- **CTA:** "Join as an inspector"

Role selection & sign-up flow

Role picker (/signup)

- **Title:** "How will you use Velora?"
- **Subtitle:** "Pick one to get started — you can add another role later from your account."
- **Card 1 — Client** — Label: "I'm building" · Description: "Hire a contractor and pay only for work an inspector has verified." · CTA: "Continue as a client"
- **Card 2 — Contractor** — Label: "I build" · Description: "Bid on funded jobs and get paid the moment your work is confirmed." · CTA: "Continue as a contractor"
- **Card 3 — Inspector** — Label: "I inspect" · Description: "Verify site work as a licensed QS, structural engineer, or architect." · CTA: "Continue as an inspector"

Each landing page's own CTA skips this screen and opens the matching form directly, with a small link at the top: "Not a [role]? Switch roles" in case of a wrong click.

Client sign-up form

Field	Label	Helper / notes
Name	"Full name"	—
Email	"Email address"	Placeholder: name@example.com

Field	Label	Helper / notes
Phone	"Phone number"	"We'll text a code to confirm it's you."
Password	"Create a password"	"At least 8 characters."
Terms	checkbox	"I agree to Velora's Terms of Service and Privacy Policy."

- **Submit CTA:** "Create my account"
- **Below form:** "Already have an account? Log in"
- **Inline errors:** "Enter your full name" · "Email must include @" · "Enter a valid phone number" · "Password must be at least 8 characters"
- **System error:** "Couldn't create account. That email is already registered. Log in instead or use a different email."
- **Success screen** — Title: "You're in, [first name]." Body: "Tell us what you're building next, so we can help you find a contractor and an inspector." CTA: "Start my first project"

Contractor sign-up form

Field	Label	Helper / notes
Business name	"Company name"	"Or your own name, if you work independently."
Contact name	"Your full name"	—
Email	"Email address"	—
Phone	"Phone number"	—
Password	"Create a password"	"At least 8 characters."
Experience	"Years of experience"	—
Location	"Where do you work?"	"State or region — clients will see this on your profile."
Specialties	"What do you build?"	"Select all that apply." Options: Residential, Renovation, Roofing, Electrical, Plumbing, Other
Terms	checkbox	Same as client

- **Submit CTA:** "Create my account"

- **Success screen** — Title: "Welcome, [company name]." Body: "Finish your profile so you show up in searches and can start bidding." CTA: "Complete my profile"

Inspector sign-up form

Field	Label	Helper / notes
Name	"Full name"	—
Profession	"What's your profession?"	Options: Quantity surveyor, Structural engineer, Architect, Other
Licence number	"Licence number"	"We verify this before your profile goes live."
Licensing body	"Issued by"	Placeholder: e.g. Nigerian Institute of Quantity Surveyors
Email	"Email address"	—
Phone	"Phone number"	—
Password	"Create a password"	"At least 8 characters."
Service areas	"Where can you inspect?"	"Select the states or regions you can reach."
Experience	"Years of experience"	—
Terms	checkbox	Same as client

- **Submit CTA:** "Create my account"
- **Success screen** — Title: "Welcome, [name]." Body: "We're verifying your credentials — we'll email you the moment your profile goes live." (*Verification turnaround time isn't defined yet — see Open questions.*)

Shared components

Header (all three landing pages)

- Logo: "Velora"
- Nav links: "How it works" · "Fees" · "FAQ"
- Role switch (small text): "Building from abroad? · Bidding on builds? · Licensed to inspect?" — links to the other two landing pages; the current one isn't shown as a link.
- Secondary link: "Log in"

- Primary CTA (changes per page): "Start your build" (Client) · "Find your next job" (Contractor) · "Start inspecting" (Inspector)

Footer (all pages)

- Tagline: "Escrow-backed construction payments, verified in person."
- Column — For clients: How it works · Fees · FAQ · Browse contractors · Browse inspectors
- Column — For contractors: How it works · Fees · FAQ · Find jobs
- Column — For inspectors: How it works · Fees · FAQ · Find jobs
- Column — Company: About · Contact · Terms · Privacy
- Trust line: "Built on Solana. Settled in USDC. No single party — not the contractor, not the client, not Velora — can move escrowed funds alone."
- Copyright: "© 2026 Velora. All rights reserved."

Trust strip (near the hero or fees section, all pages)

Three short badges, plain language, no jargon:

- "Two approvals needed before any money moves"
- "Held in an account tied to your project, not to Velora"
- "Settles in seconds, not days"

General FAQ (site-wide, not role-specific)

- **What is USDC?** A digital dollar — each one is built to always equal \$1. Velora uses it to move money instantly and cheaply across borders.
- **Why Solana?** It settles payments in seconds for a fraction of a cent, which is what makes near-instant, low-fee escrow possible.
- **Where is Velora available?** (*Open question — see Open questions below.*)

Handoff notes & open questions

How to use this

Hand this doc to whoever builds the pages — a designer, a developer, or an AI design tool (Figma AI, v0, Lovable, or Mogie's own frontend pipeline). Feed it one landing page at a time with an instruction like: "Build this as a responsive landing page using the structure and copy below — apply Velora's visual identity." Colour, typography, imagery, and layout grid are deliberately left open here; this brief covers content and structure only.

Open questions to settle before copy is locked

1. **Fiat on-ramp** — does a client need a crypto wallet, or does Velora convert currency invisibly? The Client FAQ above assumes the latter.
2. **Dispute path** — what happens when a client won't approve real, inspector-confirmed work? Contractors will ask this before they sign up.
3. **Rejected-stage workflow** — after an inspector rejects a stage, can the contractor redo it? Is the inspector still paid for the visit?
4. **Inspector verification time** — how long between sign-up and a licence being verified?
5. **Geographic scope** — which countries can sign up as clients, and which states or regions can contractors and inspectors serve?

Resolve these before the FAQ sections ship — visitors on all three pages will hit these questions almost immediately.
